

Acacia PSO-2 Stealth™

Before

Acacia Estate was concerned about their existing plug boxes in the common areas of the estate. Victor Pereira, Operations and Projects on the board of trustees, discovered Allbro's PSO-2 Stealth™ range whilst searching for a solution. "The trustees identified operational health and safety risks which needed to be mitigated before any serious injury or liability."

Problems with the previous outlet boxes:

- Lack of security
- Easily accessed by children
- Residents used the outlets to wash and vacuum their vehicles and charge their phones

Benefits of the PSO-2 Stealth™:

- Waterproof
- Tight seal
- Secure and lockable
- GRP lid has a 25+ year UV life
- Proudly South African brand

The win for us here was really the assured peace of mind that it brings," says Victor. "We've got a lot of kids walking around the estate. As a parent, I thought, well, we'd better get these locked some way." The PSO-2 Stealth™ is padlock-able and has been designed so that the lid of the enclosure can seal while there is a plug inside. This ensures not only that it is water-tight but also enables the box to be locked while in use. "The common property costs don't go up," says Victor, which keeps the board of trustees happy. Acacia Estate switched all of their socket outlets along the main driveway to PSO-2 Stealth™ enclosures and are looking forward to partnering with Allbro for other projects in the future. "The PSO-2 Stealth™ is a win for our estate."
